SUMMARY

Enthusiastic learner with a background in machine learning, deep learning, natural language processing, data science and analytics. Continuously developing problem-solving and research skills through hands-on projects and collaboration, with a keen interest in contributing to innovative solutions in these fields.

EDUCATION

Khwopa College Of Engineering

Bachelor of Engineering(B.E.) in Computer Engineering

Libali, Bhaktapur, Nepal

2020 – Present

EXPERIENCE

College Representative of IEEE, Pulchowk

My role as a college representative is to promote IEEE activities, share event information, and collaborate to grow the student network.

College Representative of Code For Change

My role as a college representative was to disseminate information about events organized by Code For Change and encourage participation among students.

We, the team of Code For Change, recently organized an IT mela at Thapathali Campus. I was part of the documentation team, responsible for creating captions and Memorandums of Understanding (MOUs) for companies and colleges.

PROJECTS

Fake News Detection System Using Deep Learning

In this project, Bi-LSTM and LSTM along with Word2Vec and one-hot encoding were used. Among the four models—LSTM+one-hot encoding, LSTM+Word2Vec, Bi-LSTM+one-hot encoding, and Bi-LSTM+Word2Vec—the Bi-LSTM with Word2Vec achieved the best performance on the ISOT dataset.

Nanogpt

In this project, the decoder only transformer was used to form a nano Generative Pretrained Transformer consisting of 0.236948 million parameters which was trained on small amount of datasets .

TRIPZY: Monetize Your Luggage Space On the Go

This was a project for Hacking for Empowered Nepal, where we created a platform to facilitate the efficient use of unused luggage capacity. The platform enables users to monetize their empty space by offering it to those in need of additional storage during travel. HTML, CSS, JavaScript, Flask, and MySQL were used in its development.

SahaYatri: A Ride Pooling Platform

This project was for KathCode: Code For Sustainability, organized by the Kathford IT Club. It involved developing a ride-pooling platform aimed at promoting sustainable transportation by reducing the number of single-occupancy vehicles on the road. The platform connects riders with similar routes, allowing them to share rides, reduce travel costs, and minimize their carbon footprint. PHP, HTML, CSS, and JavaScript were used.

Movie Recommendation System

In this project, an end-to-end movie recommendation system was developed using content-based filtering. The tags for each movie were created by combining genre, overview, cast, keywords and crew information. Cosine similarity was then

used to measure the similarity between the movies.

Handwritten Digit Recognition Using ANN and CNN

In this project, both Artificial Neural Networks (ANN) and Convolutional Neural Networks (CNN) were used for digit recognition. The CNN outperformed the ANN.

Parkinson Disease Detection Using Logistic Regression

In this project, the Logistic Regression algorithm was used for detection based on voice measurement data of people.

Sentiment Analysis Of Restaurant Reviews

In this Sentiment Analysis of Restaurant Reviews, the reviews are classified as either positive or negative. Three different models were used for this classification: Bernoulli Naive Bayes, Multinomial Naive Bayes, and Logistic Regression. Among these models, Multinomial Naive Bayes achieved the highest accuracy.

For further project details, you can visit my github profile: github.com/ayushreekharel

SKILLS

Programming Language: Python, SQL, C/C++, HTML, CSS

Domains: AI, ML, Deep Learning, Natural Language Processing(NLP), Data Science

Python Packages: Pandas, Numpy, Matplotlib, Keras, Tensorflow, scikit-learn, Flask, Pytorch, FastAPI, BeautifulSoup

Software & Tools: GitHub, Google Colab, VS Code, Jupyter, LaTeX

Others: Slack, Asana

TRAINING AND CERTIFICATIONS

- Machine Learning Specialization - DeepLearning.AI
- First Runner Up for the event "Kathcode: Code for Sustainability" organized by Kathford IT club.
- Participation in Nepal's Largest All Female Hackathon: Hacking for Empowered Nepal organized by Shequal Foundation in association with Teslatch, supported by UN Women & US Embassy
- Completion of Impacters: Getting Started With Machine Learning Workshop organized by WODES and naya
- Participation in a five day training on Robot making, IOT, Hardware Programming, Drone and 3D Printing under Project Digital SHE "Strengthening her Digital Equality" organized by Miss-Tech::Robotics Association of Nepal and Ministry of Social Development Bagmati Province Government in support of Bhaktapur Municipality and Khwopa Engineering College organized from 27th Jestha 2079 to 31st Jestha 2079
- Software Fellowship at LOCUS 2025, IOE Pulchowk
- Intermediate Python - DataCamp
- Introduction to Deep Learning with PyTorch - DataCamp
- Introduction to Power BI - DataCamp
- Introduction to Snowflake - DataCamp
- Large Language Model(LLMs) Concepts - DataCamp
- PostgreSQL Summary Stats and Window Functions - DataCamp
- Introduction to Tableau - DataCamp
- Participation in Hult Prize at IOE,Pulchowk Campus 2023
- Participation in Model United Nations Workshop
